CRI & Regional Middle School (6-8)
Enrichment/Instructional Packet
July 1-August 23, 2020

Math, Reading, Science, Social Studies

Prince George’s County Public Schools
Division of Academics
Department of Curriculum and Instruction
June 17, 2020

Dear Middle School (Grades 6-8) CRI and Regional Program Parents/Guardians,

Congratulations! You and your child made it through the school closure that started on March 16, 2020. The Department of Special Education wants you to know how much we appreciate your partnership with your child's teachers and support staff. Many creative instructional practices and materials have been used to help your child continue to work on their educational goals, including all of the hard work we know you have done at home. We want to offer the materials in this packet to you and your child as a way to allow continued growth over the summer. We know our students need the practice to keep their skills sharp!

This packet contains instructional activities in Reading, English, Language Arts, Math, Science, and Social Studies taught through the domains of Lifelong Learning, Daily Living, Personal Life, and Employability. The activities come with materials that you may print out and cut out if you choose. The instruction your child receives when he/she is in school or learning virtually is repeated over multiple days to help students learn and retain the skills and information. You may present the stories and learning activities more than one time to your child while at home.

This packet does not need to be turned in for grades. If you would like to share the completed pages with your child's teacher when school resumes in the new school year, it will provide that teacher with useful information about how your child's knowledge and skills have changed over the summer.

We wish you a healthy, happy, and restful summer. We can't wait to see you and your child for the 2020-2021 school year!

Sincerely,

Jennifer Brown
Instructional Supervisor for Special Programs
PGCPS Department of Special Education
At the Amusement Park
At the Amusement Park

Level B

by Jen Voight

Illustrated by Alex Wisehart
Zach is at the amusement park.
The merry-go-round moves slowly.
The roller coaster moves fast.
The pirate ship moves back and forth.
The water on the waterslide moves down.
The dart moves in the air.
What would you try?
The End

Important Idea or Lesson

What is an important idea or lesson you learned from the story?

☐ a. Zach needs to go on every ride at the amusement park.

☐ b. Zach cannot go to the amusement park.

☐ c. Zach can choose what to try at the amusement park.
Chapter 1: Choosing Activities
The Kinder family is at an amusement park.

They see roller coasters and rides.

They see games, shops and places to eat.
The amusement park is very big.

The family will spend all day at the park.

But, they cannot do everything.

The Kinders must choose what to do.
Mr. Kinder has a map of the amusement park.

The family looks at the map.

Each person chooses one thing to do.

The family will do those things first.
Gwen chooses the water rides.

Gwen will slide down the waterslide.

Gwen can also float around in a tube.

Gwen loves to play in the water.
Ben chooses the roller coasters.

Roller coasters move very fast.

They make turns and loops.

Ben wants to ride down the big hills.
Jen chooses to ride the Ferris wheel.

The Ferris wheel moves slow.

People go up very high.

Jen wants to ride to the top of the Ferris wheel.
Mr. Kinder chooses to play games.

People throw balls or rings to win some games.

People get prizes if they win.

Mr. Kinder wants the family to win prizes.
Mrs. Kinder chooses to shop at the gift shop.

Gift shops sell items like T-shirts and mugs.

Mrs. Kinder wants everyone to buy something.

Later on, they can think about their trip.
The family will go to the water rides first.

Next, they will ride roller coasters.

Then, they will ride the Ferris wheel.

Finally, they will play games and shop.

AMUSEMENT PARK

SOCIAL SKILLS

Wait in line for your turn.

Keep some space between yourself and others in line. If people stand too close, nicely ask them to step back.

If you see a bag or other items left on a bench or near a ride, leave them alone.

Wear headphones or go to a quiet place with someone if it is too loud.

Buy or bring your own food; do not share food with strangers.

You may not get to choose your seat on every ride. It is OK to wait so your whole group can ride together.

Say when you don’t like or don’t want to do something.

Keep your hands to yourself.

Ask an amusement park employee for help.

**Noodle Loop the Loop**

**NEED**
- 2 ¼-in diameter foam pool noodle, cut in half lengthwise
- glass marbles
- painter’s tape or masking tape (2-in wide)
- tape measure
- books
- plastic cup
- ruler

**What We Know:**
- A marble at the top of a ramp will move down.
- A marble will not move unless something moves it.
- A marble will move differently on different types of ramps.

**Step 1: Ask a Question**
- How high does a ramp have to be for a marble to move around a loop?

**Step 2: Make a Guess / Hypothesis**
- I think...
  - the marble will move around a loop using a low ramp.
  - the marble will move around a loop using a medium ramp.
  - the marble will move around a loop using a high ramp.

My guess:
_______
_______
_______
1. Tape the ends of the pool noodle halves together to make one continuous track. Press tape down into groove of pool noodle to make track as smooth as possible.

2. Make an 11-inch tall loop with one end of the pool noodle and tape to the floor.

3. Tape cup to floor at exit end of the noodle.

4. Tape the start end of the pool noodle to a stack of books to make a 6-inch tall ramp. Be sure to pull the noodle tight so that the ramp doesn't droop.
Step 3: Do an Experiment

5. Place a marble at the top of the ramp. Use the ruler to hold the marble in groove of the noodle.

6. Remove the ruler to let the marble move down the ramp.

7. Record your observations on the data chart.

8. Repeat steps 4 - 7, taping the start end of the pool noodle to an 18-inch tall ramp and then a 30-inch tall ramp.
### Step 4: Organize Data

<table>
<thead>

</table>
Discussion:

- At the top of the ramp, gravity pulls on the marble. Gravity pulls the marble down toward the ground. The higher the ramp, the more time gravity pulls on the marble. The more gravity pulls on the marble, the faster it will go. The marble uses this speed to move around the loop. The marble on the low and medium ramps does not gain enough speed to move around the loop. The marble on the high ramp has enough speed to move around the loop. Gravity has more time to pull on the marble and make it faster because the ramp is longer.

- Extend this lesson by trying different-sized marbles, adding additional track to the slope of the roller coaster track, or changing the size of the loop the loop. Find out if the height of the start end needs to change when the loop the loop gets bigger. Discuss with the students how the marble changes from potential energy to kinetic energy as it moves down the ramp. The higher the starting point of the ramp, the more potential and kinetic energy the marble has to make it through the loop.
Today we . . .
I want to go on a ride

I want to ride the

It moves

It makes me
What should I buy at the food stand

I am hungry for a

I will get

It will taste
I'm going to have fun this summer

I want to

I will need

I want to do this

Independence Day celebrates the U.S. becoming a country on July 4, 1776. Before that time, America was only 13 colonies ruled by England. People in the American colonies thought England’s laws were not fair. Leaders decided to make their own, free country. Leaders met in Philadelphia, Pennsylvania, and wrote down why America should be free. They created a document called the Declaration of Independence. The leaders signed the document on July 4, 1776.
The next year, Americans started celebrating Independence Day by ringing bells and lighting firecrackers on July 4. Today many people call Independence Day the Fourth of July. They celebrate by flying the American flag, watching parades and having cookouts. Many Americans watch beautiful fireworks shows at night. They celebrate the birthday of the U.S.!
INDEPENDENCE DAY

July 4

Independence Day is America's birthday.

America became a country on July 4, 1776.

England had ruled the 13 colonies in America.

Americans thought England's laws were not fair.

American leaders decided to make America free.
The leaders met in Philadelphia, Pennsylvania, in 1776.

They wrote down why America should be free.

Leaders signed that Declaration of Independence on July 4.

The next year, Americans started celebrating that day.

They rang bells and lit firecrackers.
Now people call Independence Day, the Fourth of July.

To celebrate, people fly American flags, watch parades and have cookouts.

Many people watch fireworks at night.

They celebrate the birthday of the U.S.!
1. Where is Zach? (library, school, amusement park)

2. How does the merry-go-round move? (slow, down, straight)

3. How does the roller coaster move? (circle, slow, fast)

4. How does the water on the waterslide move? (up, down, zigzag)

5. What does the balloon dart game look like? (fun, pretty, scary)
