### Report Notes
The United States Environmental Protection Agency (EPA) has established a radon action level of 4.0 pCi/L. EPA recommends mitigation of a structure if the confirmed radon level is equal to or greater than 4.0 pCi/L.

The radon tests were performed using liquid scintillation radon detectors and counted on a liquid scintillation counter following EPA Method # 402-R-92-004 testing protocol for Radon in Air testing. EPA recommends retesting every two years.

Please contact EMSL Analytical, Inc. or your State Health Department for further information.

All procedures used for generating this report are in complete accordance with the current EPA protocols for the analysis of Radon in Air.

---
