Attention: Mr. Alex Baylor

RE: Indoor Air Quality Screening, High Point High School
IFB: 022-19
ATI Project Number: ATI19-692
Revision 1

Dear Mr. Baylor:

Prince George's County Public Schools requested that ATI, Inc., conduct a proactive indoor air quality (IAQ) screening at High Point High School. The IAQ screening was conducted on May 31, 2019. Its key findings are enclosed in the Executive Summary on page three, and the official laboratory report for total fungal spore trap sampling is enclosed in Appendix A.

Thank you for the opportunity to provide Industrial Hygiene services for Prince George's County Public Schools. If you have any questions regarding this report, please contact us at (202) 643-4283.

Sincerely,
ATI, INC.

Courtney E. McCall

NTE	Not to exceed
°F	degree Fahrenheit
PPM	Parts Per Million

1. Executive Summary and Key Findings

ATI conducted a proactive Indoor Air Quality (IAQ) screening on May 31, 2019, at High Point High School, located at 3601 Powder Mill Road, Beltsville, MD 20705.

The screening included a visual assessment of randomly selected classrooms and other frequently occupied spaces, such as the cafeteria, the main office, and classrooms, for potential IAQ contributors and pathways. As part of the screening, ATI collected direct reading measurements for comfort parameters, including temperature, relative humidity, carbon dioxide, and carbon monoxide. Also, ATI collected total fungal air samples on spore trap cassettes for microbiological analysis.

The following is a summary of the key findings from this screening:

1. Three locations exceeded the ASHRAE summer temperature guidelines and four fell below the recommended range, which is 73-79°F.
2. Relative humidity measurements were within ASHRAE guidelines, except in one location that exceeded 65%.
3. Three tested locations exceeded the ASHRAE limit for carbon dioxide, which was 1,032 parts per million (PPM).
4. Carbon monoxide was not detected throughout the tested spaces.
5. Total concentrations detected in each tested space did not exceed the spore counts detected outdoors, 46,960 counts/m^3. In two indoor areas, Cladosporium was found slightly elevated over the outdoor sample but not at a level to pose a concern. Ascospores and Basidiospores detected indoors did not exceed the outside sample, which is favorable. Aspergillus/Penicillium was detected indoors at low concentrations and was not detected outdoors. Although Aspergillus/Penicillium is known to cause allergies, the low concentration detected indoors does not pose a concern.

2. Assessment Methods

Ms. Mikal Frater of ATI, Inc. conducted a visual assessment and air sampling on May 31, 2019. Sampled rooms were randomly selected and accounted for approximately 10% of classrooms or a minimum of five samples. Visual observations were made at the time the samples were collected. ATI references the American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) *Standard 62.1 – 2016* and ASHRAE *Standard 55 – 2017* when providing IAQ services to clients. ASHRAE is an industry leader on energy efficiency and indoor air quality.

All measurements and air samples were collected between three-six feet from floor elevation, which represents the breathing zone, and away from air-supply and return diffusers. Real-time direct readings for temperature, relative humidity, carbon dioxide (CO_2), and carbon monoxide (CO), were obtained with a calibrated TSI Q-Trak 7575-X Meter and attached 982 Probe.

Total fungal air samples were collected with a Buck BioAire High-Volume Sampling Pump on Zefon Air-O-Cell spore-trap cassettes at a flow rate of 15 liters per minute for five minutes, for a sample volume of 75 liters. The samples were analyzed by direct microscopic examination (identifies and counts both viable and

non-viable spores, which is then considered "total fungal"), via the American Society for Testing and Materials (ASTM) Standard D7391-09 by EMSL Analytical, Inc., (EMSL) located in Beltsville, MD.

EMSL participates in the National Institute of Standards and Technology's (NIST's) National Voluntary Laboratory Accreditation Program (NVLAP) for general laboratory performance and management and the American Industrial Hygiene Association (AIHA) Environmental Microbial Laboratory Accreditation Program (EMLAP, Certificate Number 102891).

Instrument calibration records are included in Appendix B of this report.

3. Visual Observations

Table 1: Visual Observations and Sampling Locations

Sample Location	Observations
Outside	• Moderate traffic on adjacent road. • Parking lot surrounded by trees. • Light winds. • Sunny, clear skies. • Garbage truck drove into parking lot during sampling.
Main Office	• Three occupants. • Light foot traffic. • Five plants scattered around room. • Stacks of boxes in area, no dust accumulation. • Office space splits into additional rooms. • Two air returns, one air diffuser. • Two portions of the school each built around 1958 and 1975. • Space is approximately 790 ft.^{2}
Auditorium	• Nine air diffusers, nine air returns. • Diffusers have light dirt load. • Large occupied area, approximately 6,240 ft.^{2} • Fifty occupants scattered around auditorium. • Door to corridor is open. • Light to moderate foot traffic.
Gymnasium	• Two air returns, 12 air diffusers. • 62 occupants scattered around area. • Door to corridor open. • Four fans that let in outside air are OFF. • Children are moving around. • Space is approximately 9,357 ft.^{2}
Cafeteria	• Four air returns, 24 air diffusers. • Large occupied area. • Two cafeterias "separated" by pillars. Samples taken between both sides. • Four occupants scattered around room.

Sample Location	Observations
	• Five wall units.
Room 125	• Window open. • A/C off – not working. • Wall unit fan ON. • Three occupants in area. • Individual oscillating fan OFF – heavy dirt load. • Light brown stain on ceiling tile near wall unit. • Space is approximately 772 ft.^{2}
Room 237	• 22 occupants in area. • A/C on and window open. • Stacks of books and boxes in room. • Wall unit in room. • Stacks of paper near wall unit. • Space is approximately 849 ft.^{2}
Room 216	• 12 occupants in area during sampling. • Concrete ceiling. • Door to corridor open. • Thermostat controlled by teacher. • Daikin ceiling unit x2 • Space is approximately 755 ft.^{2}
Room 200	• A/C unit OFF. • 32 occupants in room during sampling. • Friedrich A/C unit. • Daikan ceiling unit cracked and held together by rope – hazard. • Crowded/cluttered classroom • Printer about 5-6 ft. from sampling area.
Room 308	• Four air returns, eight air diffusers. • Four large windows open. • 22 occupants in area during sampling. • Five large plants in area. • No stained ceiling tiles or growth visible. • Space is approximately 1,104 ft.^{2}
Room 324	• One wall unit. • Individual oscillating fan ON. • Two windows open during sampling. • A/C ON. • Three occupants in sampling area. • Space is approximately 1,957 ft.^{2}
Room 22	• Two air returns, one air diffuser. • Missing ceiling tile in one corner of room. • Three fish tanks in room. • One dry, dead plant in corner of room.

Sample Location	Observations
	• Brown stain on ceiling tile by window with noticeable growth. Smaller light brown stain in isolated area. • Printer about 12 ft. from sampling area. • Space is approximately 1,479 ft.^{2}

4. Thermal Environmental Conditions for Human Occupancy

ASHRAE *Standard 55-2017, Thermal Environmental Conditions for Human Occupancy*, addresses thermal comfort in an office environment, which means that an employee wearing a normal amount of clothing feels neither too cold nor too warm. This standard discusses thermal comfort within the context of air temperature, humidity, and air movement and provides recommended ranges for temperature and humidity that are intended to satisfy most building occupants. The recommended ASHRAE ranges are referenced below by each comfort parameter.

4.1 Temperature

The ASHRAE standard establishes a winter comfort range of between 68°F and 75°F and a summer range of between 73°F and 79°F. The temperature measurements obtained during the May 31, 2019, screening are summarized in Table 2. As indicated by the data in the table, temperatures in the school averaged between 68.4 – 82.5°F. Of the 11 tested rooms, three exceeded the ASHRAE summer comfort range and four were below the recommended range.

Table 2: Temperature Measurements

Sample Location	May 31, 2019 °F			ASHRAE Standard °F
	Min	Max	Average	
Outside	73.8	74.6	74.2	N/A
Indoors				
Main Office	71.4	71.4	71.4	73 – 79
Auditorium	68.2	68.6	68.4	73 – 79
Gymnasium	76.3	76.5	76.4	73 – 79
Cafeteria	71.4	72.6	72.0	73 – 79
Room 125	78.9	79.9	79.4	73 – 79
Room 237	72.5	74.5	73.5	73 – 79
Room 216	71.4	71.4	71.4	73 – 79
Room 200	73.6	73.6	73.6	73 – 79
Room 308	77.8	79.8	78.8	73 – 79
Room 324	82.0	82.8	82.4	73 – 79
Room 22	82.4	82.6	82.5	73 – 79

4.2 Relative Humidity

Relative humidity is a key factor for mold growth. Mold has the potential of growing on suitable surfaces with humidity levels above 65%. ASHRAE *Standard 62.1-2016*, *Ventilation for Acceptable Indoor Air Quality,* recommends a maximum indoor relative humidity of 65% to prevent condensation of moisture on surfaces. Relative humidity below 30% may result in drying of the mucous membranes and skin. Relative humidity measurements are summarized in Table 3. As indicated by the data in the table, relative humidity measurements averaged between 48.25% and 65.5%, with one location, the cafeteria, exceeding the ASHRAE maximum recommendation of 65% relative humidity.

Table 3: Relative Humidity Measurements

Sample Location	May 31, 2019 (%)			ASHRAE Standard (% RH)
	Min	Max	Average	
Outside	52.4	55.6	54.0	N/A
Inside				
Main Office	55.0	55.6	55.3	< 65
Auditorium	50.2	51.0	50.6	< 65
Gymnasium	60.2	60.6	60.4	< 65
Cafeteria	64.6	66.4	65.5	< 65
Room 125	53.2	55.0	54.1	< 65
Room 237	59.2	62.7	60.95	< 65
Room 216	51.8	52.8	52.3	< 65
Room 200	55.2	55.2	55.2	< 65
Room 308	50.1	50.1	50.1	< 65
Room 324	47.5	49.0	48.25	< 65
Room 22	56.3	56.7	56.5	< 65

4.3 Carbon Dioxide

Carbon dioxide measurements within an occupied building are a standard method used to gauge the efficiency of ventilation systems. Carbon dioxide is a by-product of human respiration and does not pose an acute health hazard alone. Elevated concentrations may suggest that insufficient fresh air is being supplied to an occupied space and/or that the ventilation system does not provide a sufficient rate of air exchange.

Research has indicated that buildings with adequately operating ventilation systems are able to remove odors generated by activities in an indoor office environment efficiently. ASHRAE *Standard 62.1-2016* states that comfort (odor) criteria with respect to human bioeffluents are likely to be satisfied if the ventilation results indoor carbon dioxide concentrations are less than 700 parts per million (ppm) above the outdoor air concentration.

Carbon dioxide measurements are summarized in Table 4. On the day of the screening, the average outdoor carbon dioxide concentration obtained was 332 ppm, which calculates to a maximum indoor concentration of 1,032 ppm (700 + 332). The carbon dioxide levels inside the school ranged from the average minimum

detected, 308 ppm to 1,601 ppm, the average maximum detected, with three locations, Room 22, Room 200 and Room 216, exceeding the ASHRAE maximum recommended concentration of 1,032 ppm.

Table 4: Carbon Dioxide Measurements

Sample Location	May 31, 2019 Concentration (parts per million)			ASHRAE Standard (ppm) NTE
	Min	Max	Average	
Outside	321	343	332	N/A
Inside				
Main Office	640	644	642	1,032
Auditorium	352	368	360	1,032
Gymnasium	413	421	417	1,032
Cafeteria	307	309	308	1,032
Room 125	462	468	465	1,032
Room 237	893	915	904	1,032
Room 216	1,044	1,056	1,050	1,032
Room 200	1,335	1,335	1,335	1,032
Room 308	402	424	413	1,032
Room 324	430	432	431	1,032
Room 22	1,568	1,634	1,601	1,032

4.4 Carbon Monoxide

Carbon monoxide is a colorless and odorless gas produced by the incomplete combustion of carbon containing fuels. Oil, gasoline, diesel fuels, wood, coke, and coal are the major sources of carbon monoxide. ASHRAE recommends that carbon monoxide not exceed nine ppm indoors. As indicated by the data in Table 5, carbon monoxide was not detected throughout the school.

Table 5: Carbon Monoxide Measurements

Sample Location	May 31, 2019 Concentration (parts per million)			ASHRAE Standard (ppm)
	Min	Max	Average

Room 308	0	0	0	< 9
Room 324	0	0	0	< 9
Room 22	0	0	0	< 9

5. Total Fungal Air Sampling Results

Mold needs a food source, moisture, proper temperature and humidity, and at times, a source of light, to grow in an environment. Air infiltration through building entrances and exits, open windows and loading docks, and foot traffic into buildings, including the HVAC system all serve as primary pathways that can carry fungi indoors. Water leaks and humid conditions inside of buildings provide the moisture that fosters mold growth. The May 31, 2019 mold screening sampled air using spore trap cassettes in randomly selected classrooms and other areas throughout the facility. These cassettes collect both viable spores, those capable of producing more fungal colonies, and non-viable spores, which cannot reproduce. Based upon recognized industry practices, indoor mold concentrations are compared with those detected outdoors, which are also known as ambient or baseline samples.

In normal circumstances, the diversity of spores identified indoors and outdoors should be similar with some exceptions. The high concentration of one or two species of fungal spores identified indoors and the absence of the same species outdoors can indicate a moisture problem with the potential to degrade the air quality. Fungi species present indoors are typically found at levels ranging from approximately 10-50% of their levels in the outdoor air, reflecting the filtering by the building's HVAC system.

The official laboratory report with spore trap samples collected on May 31, 2019, is presented in Appendix A. Total concentrations detected in each tested space did not exceed the spore counts detected outdoors, 46,960 counts/m^3.

Ascospores, Basidiospores and Cladosporium had the highest concentrations indoors and are spores commonly found indoors. Each are known to cause allergies yet are not associated with water damaged materials in buildings. In two indoor areas, Cladosporium was found slightly elevated over the outdoor sample but not at a level to pose a concern. Ascospores and Basidiospores detected indoors did not exceed the outside sample, which is favorable.

Aspergillus/Penicillium was detected indoors at low concentrations and was not detected outdoors. Although Aspergillus/Penicillium is known to cause allergies, the low concentration detected indoors does not pose a concern.

Low concentrations of other spores, such as Cercospora, were also detected indoors but not outdoors. These low concentrations do not indicate noteworthy indoor amplification and do not pose a concern.

6. Summary of Findings

Three locations exceeded the ASHRAE summer temperature guidelines and four fell below the recommended range, which is 73-79°F. Relative humidity measurements were within ASHRAE guidelines, except in one location that exceeded 65%. Three tested locations exceeded the ASHRAE limit for carbon dioxide, which was 1,032 parts per million (PPM). Carbon monoxide was not detected throughout the tested spaces.

Total concentrations detected in each tested space did not exceed the spore counts detected outdoors, 46,960 counts/m^3. In two indoor areas, Cladosporium was found slightly elevated over the outdoor sample but not at a level to pose a concern. Ascospores and Basidiospores detected indoors did not exceed the outside sample, which is favorable. Aspergillus/Penicillium was detected indoors at low concentrations and was not detected outdoors. Although Aspergillus/Penicillium is known to cause allergies, the low concentration detected indoors does not pose a concern.

We appreciate the opportunity to provide these IAQ testing services for you. If you have any questions, please contact us at (202) 643-4283.

Sincerely,

High levels of background particulate can obscure spores and other particulates leading to underestimation. Background levels of 5 indicate an overloading of background particulates, prohibiting accurate detection and quantification. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

High levels of background particulate can obscure spores and other particulates leading to underestimation. Background levels of 5 indicate an overloading of background particulates, prohibiting accurate detection and quantification. Present = Spores detected on overloaded samples. Results are not blank corrected unless otherwise noted. The detection limit is equal to one fungal spore, structure, pollen, fiber particle or insect fragment. "*" Denotes particles found at 300X. "-" Denotes not detected. Due to method stopping rules, raw counts in excess of 100 are extrapolated based on the percentage analyzed. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

INSTRUMENT CALIBRATION REPORT

Pine Environmental Services LLC
798 Cromwell Park Dr.
Suite R & S
Glen Burnie, MD 21061

Pine Environmental Services, Inc.

Instrument ID 27136
Description TSI 982 Probe
Calibrated 5/28/2019 12:36:30PM

All instruments are calibrated by Pine Environmental Services LLC according to the manufacturer's specifications, but it is the customer's responsibility to calibrate and maintain this unit in accordance with the manufacturer's specifications and/or the customer's own specific needs.

Notify Pine Environmental Services LLC of any defect within 24 hours of receipt of equipment
Please call 800-301-9663 for Technical Assistance

INSTRUMENT CALIBRATION REPORT

Advanced Labs, Inc.

Pine Environmental Services, Inc

Instrument ID 27136
Description TSI 982 Probe
Calibrated 12/12/2018

Manufacturer TSI
Model Number 982
Serial Number P13220024
Location New Jersey
Temp 71

Classification
Status pass
Frequency Yearly EOM
Department Lab
Humidity 22

Calibration Specifications

Group # 1
Group Name Carbon Dioxide
Stated Accy Pct of Reading
Range Acc % 0.0000
Reading Acc % 3.0000
Plus/Minus 0.00

Nom In Val / In Val	In Type	Out Val	Out Type	Fnd As	Lft As	Dev%	Pass/Fail
0.00 / 0.00	ppm	0.00	ppm	0.00	0.00	0.00%	Pass
1000.00 / 1000.00	ppm	1000.00	ppm	1,009.00	1,002.00	0.20%	Pass

Group # 2
Group Name Carbon Monoxide
Stated Accy Pct of Reading
Range Acc % 0.0000
Reading Acc % 3.0000
Plus/Minus 0.00

Nom In Val / In Val	In Type	Out Val	Out Type	Fnd As	Lft As	Dev%	Pass/Fail
0.00 / 0.00	ppm	0.00	ppm	4.60	0.00	0.00%	Pass
100.00 / 100.00	ppm	100.00	ppm	96.00	100.10	0.10%	Pass

Group # 3
Group Name Relative Humidity
Stated Accy Pct of Reading
Range Acc % 0.0000
Reading Acc % 3.0000
Plus/Minus 0.00

Nom In Val / In Val	In Type	Out Val	Out Type	Fnd As	Lft As	Dev%	Pass/Fail
50.00 / 30.80	%	30.80	%	31.00	30.80	0.00%	Pass

Group # 4
Group Name Temperature
Stated Accy Plus / Minus
Range Acc % 0.0000
Reading Acc % 0.0000
Plus/Minus 1.00

Nom In Val / In Val	In Type	Out Val	Out Type	Fnd As	Lft As	Dev%	Pass/Fail
65.00 / 72.30	°F	72.30	°F	69.80	72.30	0.00%	Pass

Test Instruments Used During the Calibration

Test Instrument ID	Description	Manufacturer	Serial Number	(As Of Cal Entry Date) Last Cal Date	Next Cal Date
CO/CO2_34LS-375	100 ppm CO, 1000 ppm CO2	Calgaz	MAO-375-1		6/9/2019
MICHELL DM-509-TX-01	Relative Humidity Meter	Michell	273296	9/17/2018	9/17/2019
NITROGEN	Nitrogen 99.999%	Liquid Technology	7727-37-9	6/1/2016	6/1/2019
ZERO_AIR_105	Zero Grade Air THC <1.0 PPM	Liquid Technology	KAP-A-10	10/1/2015	10/20/2019
L-1
